PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/520,227

Applicant(s)

HILLENMEIER ET AL.

Examiner

Pavitra Kotini

Art Unit

3731

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 January 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 04 January 2005 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a) because they fail to show the coupling members and the press roll as described in the specification. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 12, 13, and 20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In particular, the structure of the press roll, in what manner the press rolls are offset, and how precisely they are able to accommodate the coupling members is obscure because it is not shown in the drawings and the terminology is unfamiliar to the depilation arts and therefore requires a more precise and detailed definition.

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Ramspeck et al. (US-5857903).

Ramspeck discloses an epilating device comprising:

Regarding **claim 1**, a rotary cylinder (7) having clamping means (8) arranged about its circumference in a manner offset in the circumferential direction (fig. 3),

Art Unit: 3731

wherein actuating means (10, 11) are designed and arranged in a manner that at least two clamping means offset in the circumferential direction are each actuated at the same time (clamping means 8 are arranged on actuating disks 10 and 11, so at least two that are circumferentially offset will be actuated simultaneously).

Regarding **claim 2**, the offset of the simultaneously actuated clamping means (8) is between 3.degree. and 45.degree (col. 12, line 9).

Regarding **claim 3**, at least two simultaneously actuated clamping means (8) offset in the circumferential direction are arranged to be offset in the axial direction (fig. 2).

Regarding **claim 4**, the clamping means (8) are each comprised of a clamping element (28) fixed relative to the rotary cylinder (7) and a movable clamping element (41) capable of being pressed against the fixed clamping element (col.10, line 57- col.12, line 7).

Regarding **claim 5**, the fixed clamping elements (28) are each formed by a side wall (25) of a hole (21) provided in the rotary cylinder (7), into which one movable clamping element (41) each immerses.

Regarding **claim 6**, the actuating means (10, 11) comprise coupling members (14) extending in the axial direction (68) of the rotary cylinder (7) and cooperating with the clamping means (8) to actuate the same.

Regarding **claim 7**, the coupling members (50-53) are designed as slides (fig. 6, 50, 53) movably guided in the axial direction (68) of the rotary cylinder (7), and wherein

Art Unit: 3731

movable clamping elements (41) are each coupled with one slide (50-53) in an angularly firm manner (fig. 6).

Regarding **claim 8**, the slides (50-53) are each slidably mounted on two mounting rods (24; col.10, lines 25-27) extending in the axial direction, slides (50-53) neighbouring in the circumferential direction comprising one common mounting rod (23) at most.

Regarding **claim 9**, the movable clamping elements (41) of the respective clamping means (8) actuated simultaneously are associated with a common spring element (19), against the force of which the clamping elements (8) are each displaceable (col.9, lines 63-67).

Regarding **claim 10**, the slides (50-53) of the respective clamping means (8) actuated simultaneously are guided on two common mounting rods (24, 35) with a spring element (19) acting in the axial direction being arranged between these slides (fig. 6), and that at least one of these slides (502 and 50) includes a region offset in the direction of rotation of the rotary cylinder (7) and at least another one of these slides (51 and 53) includes a region offset against the direction of rotation of the rotary cylinder (7), with which offset regions the movable clamping element (41 or 47) is each coupled or connected (fig. 6).

Regarding **claim 11**, the actuating means (10, 11) comprise control elements (14) arranged on the end sides of the rotary cylinder (7) and cooperating with the coupling members (50-53) to actuate the clamping means (8) (col.9, lines 55-67 and col. 10, lines 24-27, col.11, lines 8-19).

Regarding **claim 12**, on each end side of the rotary cylinder (7) a press roll (16) is arranged, onto which the coupling members run, wherein one of the press rolls is arranged to be offset relative to the opposite press roll in the circumferential direction (fig. 9 and 10) of the rotary cylinder (7).

Regarding **claim 13**, the offset of the press rolls is $<60^\circ$. (fig. 9 and 10 show various degrees of offset).

Regarding **claim 14**, the offset of the simultaneously actuated clamping means (8) is about 32° (col. 12, line 9).

Regarding **claim 15**, the clamping means (8) are each comprised of a clamping element (28) fixed relative to the rotary cylinder (7) and a movable clamping element (41) capable of being pressed against the fixed clamping element (fig. 5).

Regarding **claim 16**, the actuating means (10, 11) comprise coupling members (14) extending in the axial direction (68) of the rotary cylinder (7) and cooperating with the clamping means (8) to actuate the same.

Regarding **claim 17**, the actuating means (10, 11) comprise coupling members (14) extending in the axial direction of the rotary cylinder (7) and cooperating with the clamping means (8) to actuate the same.

Regarding **claim 18**, the movable clamping elements (41) of the respective clamping means (8) actuated simultaneously are associated with a common spring element (19), against the force of which the clamping elements (8) are each displaceable.

Regarding **claim 19**, the movable clamping elements (41) of the respective clamping means (8) actuated simultaneously are associated with a common spring element (19), against the force of which the clamping elements (8) are each displaceable.

Regarding **claim 20**, the offset of the press rolls is about 32.degree (fig. 9 and 10 show various possible degrees of offset).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pavitra Kotini whose telephone number is 571-272-0624. The examiner can normally be reached on M-F 8:30am to 6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anhtuan Nguyen can be reached on 571-272-4963. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
